

HL7 FHIR 技術概要と開発

日本HL7協会 適合性認定委員長

塩川 康成

2020年6月5日

日本医療情報学会春季学術大会チュートリアル

<http://www.hl7.org/fhir/?ref=learnmore>

<http://www.fhir.org>

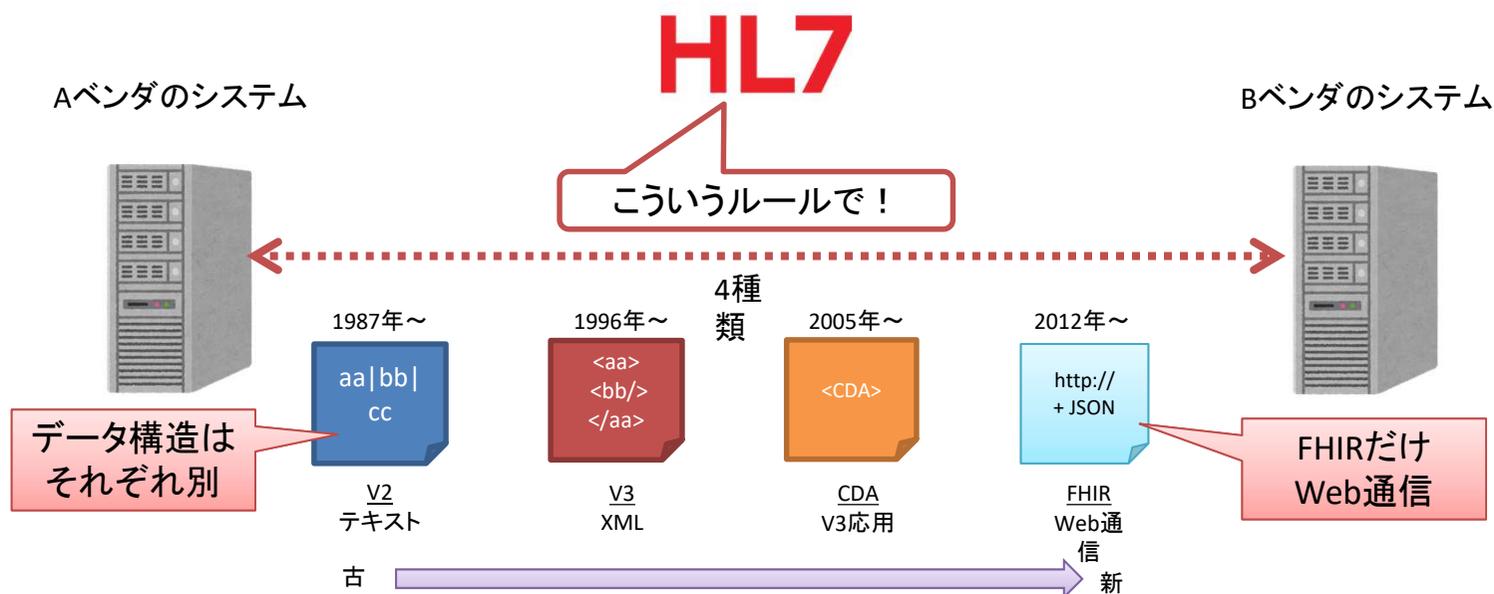

※この資料は技術委員会 平井先生の資料をベースに若干手を加えたものです。

1. 実装面から見た、FHIRの技術概要
 - RESTful の基礎知識
 - リソース定義と、Profile、Extension
 - 4つのParadigm

2. HL7 v2 メッセージ → FHIR の実例解説
 - 実装で使うツール類
 - HL7 v2 メッセージを FHIR Resource 群にマッピング
 - FHIR サーバへの Resource 生成と POST
 - FHIR サーバからの Resource Get

HL7はコンピュータ間での医療文書情報のデータ連携を標準化するための国際規格で、V2(テキスト)、V3(XML)、CDA(V3の進化版)、FHIR(Web通信)の4種類がある。

それぞれ、データ構造(フォーマット)のルールを定めている。FHIRのみ、Web通信での連携を前提としている。

- 米国民全員が自身の医療情報にアクセスできる
 - ブッシュHealth IT Initiative、オバマHITECH(Meaningful Use)
 - 自身の健康管理に参加、重複処方、処方ミスの把握
- SOA(ROA)によるWEBサービス (スマホの普及)
 - SOAP(複雑、難解だが)→REST(ROA)=RFH(FHIR)
 - 多くの人、多くの(中小も)企業が開発に参加できる
 - ほとんどの国民が医療データにアクセスできる
- そして、重要な情報はCDAで→C-CDA
- さらに、米国 Standard Strategy
 - 今はUS Realm → World Wide へ

- ONCの方針
 - WEBサービス (Service Oriented Architecture)

SOA → REST → RESTful・ROA

- HL7 V2・V3では多くの専門家が必要
 - 多くの人、多くの企業が参加できなければならない

FHIRリソースは

- データ交換の小さな論理的に独立したユニット
- 振る舞いと意味が定義されている
- 身元と所在が明確
- トランザクションの最小単位
- 医療に関連すること

FHIR® FHIR R4

Home Getting Started Documentation Resources Profiles Extensions Operations Terminologies

仕様書 リソース プロファイル

This is the Current officially released version of FHIR, which is R4.
For a full list of available versions, see the [Directory of published versions](#).

0 Welcome to FHIR®

FHIR is a standard for health care data exchange, published by HL7®.

First time here?
See the [executive summary](#), the [developer's introduction](#), [clinical introduction](#), or [architect's introduction](#), and then the [FHIR overview / roadmap & Timelines](#). See also the [open license](#) (and don't miss the full [Table of Contents](#) and the [Community Credits](#) or you can [search this specification](#)).

Level 1 Basic framework on which the specification is built

Foundation Base Documentation, XML, JSON, Data Types, Extensions

Level 2 Supporting implementation and binding to external specifications

Implementer Support Downloads, Version Mgmt, Use Cases, Testing

Security & Privacy Security, Consent, Provenance, AuditEvent

Conformance StructureDefinition, CapabilityStatement, ImplementationGuide, Profiling

Terminology CodeSystem, ValueSet, ConceptMap, Terminology Svc

Exchange REST API + Search Documents Messaging Services Databases

Level 3 Linking to real world concepts in the healthcare system

Administration Patient, Practitioner, CareTeam, Device, Organization, Location, Healthcare Service

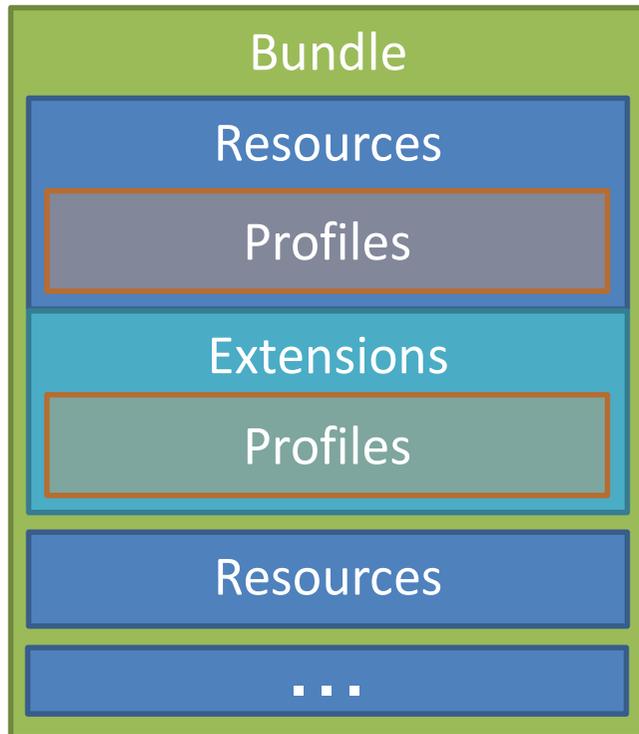

Level 4 Record-keeping and Data Exchange for the healthcare process

Clinical **Diagnostics** **Medications** **Workflow** **Financial**

http://www.hl7.org/fhir/?ref=learnmore

概要とサマリー

仕様カテゴリ 5つのレベル

- 基本 Resource だけでは不十分である
⇒ 医療には多様な背景、状況がある
- 特定の実装・ユースケースには次のような要求がある
 - Resource の制約 ⇒ Profiles
 - Resource の拡張 ⇒ Extensions
 - 特殊なコードセット、用語
 - 特化したリソースの活用
- FHIR はプラットフォームの仕様である
 - Profile は特定の要件(目的)に適合するものである
 - 基本通信フォーマットは変更しない
- 実運用では Resource の組み合わせが使われる
 - Bundle は複数の(拡張、制約を定義された)Resource をまとめて定義できる

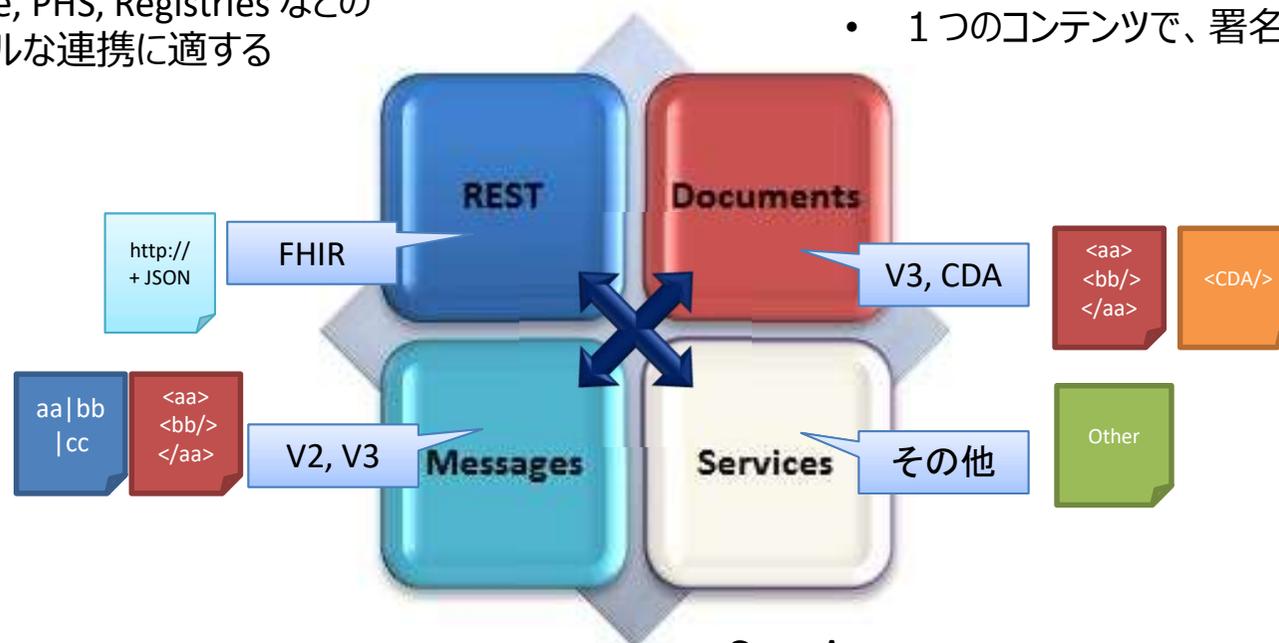

➤ 通信上の4つの Paradigms

REST (REpresentational State Transfer)

- HTTPの活用、操作は事前定義
- Mobile, PHS, Registries などのシンプルな連携に適する

Documents

- 独立型文書 (CDA) または集約された Resource のタイプ
- 1つのコンテンツで、署名認証などが可

Messages

- v2, v3と同様でバンドルリソース集合
- 要求+応答のバンドル
- イベント駆動型で非同期も可

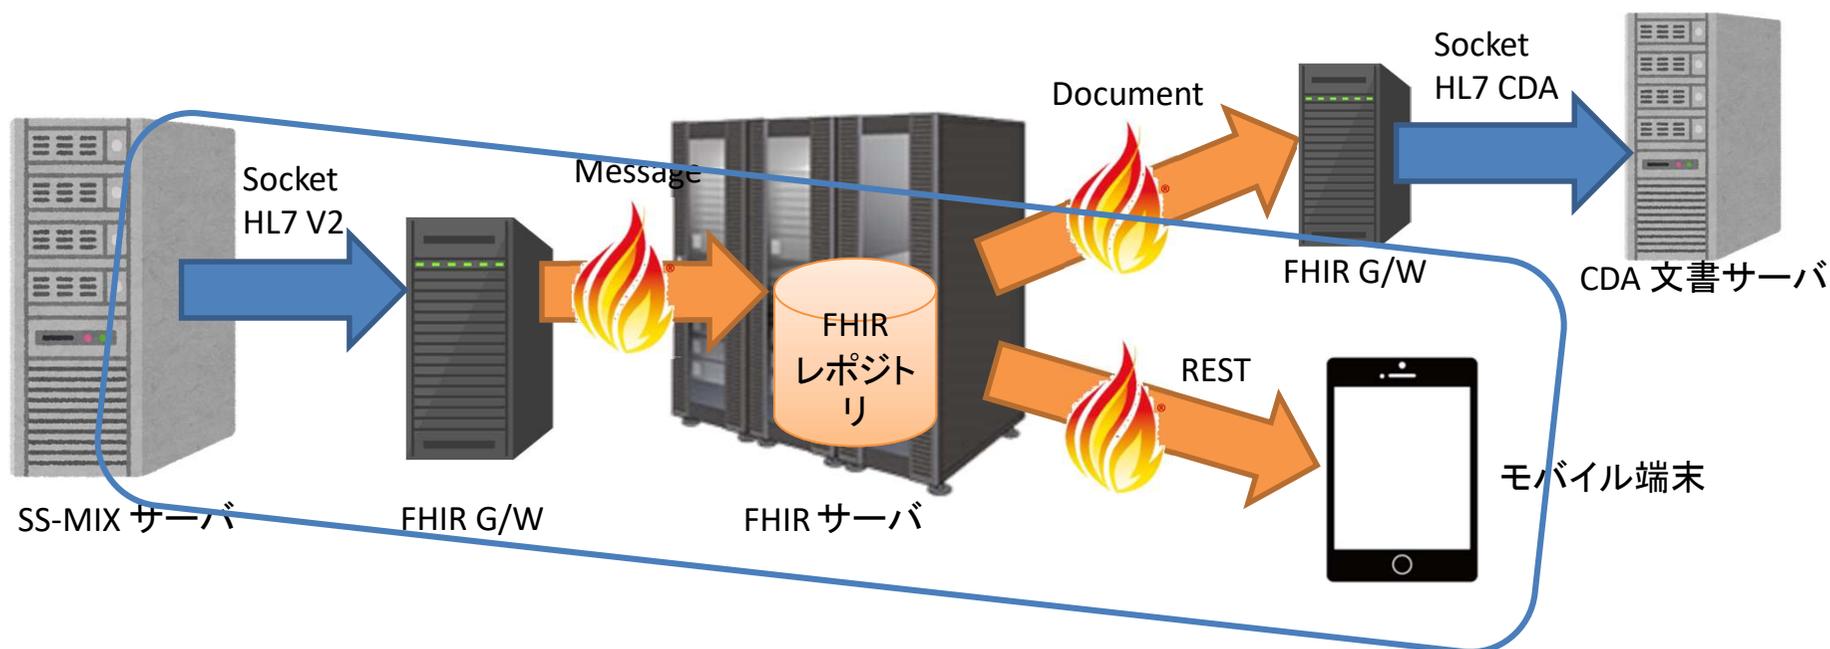

Services

- SOA原則に基づき、自由にワークフローを実現
- 制約：FHIRリソースに適すること。

1. 実装面から見た、FHIRの技術概要
 - RESTful の基礎知識
 - リソース定義と、Profile、Extension
 - 4つのParadigm

2. HL7 v2 メッセージ → FHIR の実例解説
 - 実装で使うツール類
 - HL7 v2 メッセージを FHIR Resource 群にマッピング
 - FHIR サーバへの Resource 生成と POST
 - FHIR サーバからの Resource Get

- 通信上の4つの Paradigms
 - SS-MIXサーバから、ストレージされていた HL7 V2 情報を FHIR G/W経由で FHIR サーバに送付。FHIRレポジトリに JSON、XML等で蓄積。
 - さらに別の Paradigm でそれを共有し、参照することができる。

↑ この部分の実装に Focus します。

リソース DEMO用 プログラム

HAPI Java開発Tutorialより

- サンプルプログラム
<https://github.com/FirelyTeam/fhirstarters>
- RESTクライアント(Postman)
<https://github.com/FirelyTeam/fhirstarters/tree/master/postman/crud>
- FHIR Hapiサーバ
<http://hapi.fhir.org/baseDstu3/Patient>
Header name → Key: Content-Type
Header value → Value: application/fhir+json
- JAVAクラス仕様 (R4 注:1月末STU3)
<http://hapifhir.io/apidocs-dstu3/index.html>

※今日はスライド解説のみで DEMO は行いません。

The screenshot shows the HL7.org website with the following content:

- Navigation:** Home, Getting Started, Downloads - FHIR v4.0.0
- Implementation Tools:**
 - Validator: The official FHIR validator - a Java jar file that can be used to validate resources. See [Validation Tools](#) for further information, or [Using the FHIR Validator](#) for parameter documentation
 - IG Publisher: The [Implementation Guide Publishing Tool](#) (see [IG Publishing documentation](#))
 - NPM Package: The [NPM Package](#) used by many of the FHIR tools (particularly the IG publisher and the validator). This contains all the conformance & example resources, and various publishing support files. Note that the tools usually find this package directly, and there's no need to download it
 - Translation File: [Translations of common FHIR names and messages](#) into multiple languages (see [chat.fhir.org translations stream](#) for guidance on how to add to more)
 - Icon Pack: The [FHIR Icon](#) at various resolutions. Any FHIR Implementation created by an organization that has attended a connectathon is allowed to use the FHIR icon in association with the application (this policy will be reviewed in the future).
 - Test Cases: A [Collection of Test Cases](#). These are XML or JSON files that provide test cases for the various FHIR reference implementations to ensure correct functioning
 - Code Generation Support: ValueSet expansions for the value sets used in schema generation (XML or JSON) + a list of all [choice elements](#) & [backbone elements](#). Note that names relevant for code generation, including resource names, element & slice names, codes, etc. may collide with reserved words in the relevant target language, and code generators will need to handle this
- Reference Implementations:**

There are many open source reference implementations available to help implementers. Here are a list of the more common implementations used by implementers:

 - Java: [HAPI-FHIR](#) Object Models, Parsers, Client + Server Framework, FHIR Validator, & Utilities. The specification is built with this Java code
 - C#: [HL7.FHIR](#) Object models, Parsers/Serializers, Utilities, and a Client. Source code on GitHub at <http://github.com/ewoutkramer/fhir-net-api>
 - Pascal: [FhirServer](#) Object models, Parsers/Serializers, Validator, Utilities, Client, and the FHIR Reference server. Requires [Delphi](#) (Unicode versions)
 - XML: [XML Tools](#): Document Rendering Stylesheet, supplementary implementation schemas and transforms
 - Javascript: See the [HL7 wiki for Javascript libraries](#) (Clients and Utilities for both servers and clients)
 - Swift: [Swift-FHIR](#) Object Model, Client and Utilities

Implementation Note: These reference implementations are provided for implementer interest and assistance. While they may be used (and are) in production systems, HL7 and their various contributors accept no liability for their use. Note that these reference implementations are provided to assist to implementers to adopt the specification, and some are maintained by the FHIR project team, but are not part of the specification, and implementations are not required to conform to these, nor are they subject to the formal standards process.
- Level 1 Basic framework on which the Foundation**
- Level 2 Supporting implementation and Implementer Support**
- Level 3 Linking to real world concepts Administration**
- Level 4 Record-keeping and Data Exchange Clinical**

Health Level Seven International - Homepage | HL7 International HAPI FHIR - The Open Source FHIR API for Java

HAPI FHIR Support Download GitHub Project Documentation Get Help Test Server

<Hapi/> HAPI-FHIR fhir made simple.

This is the homepage for the HAPI-FHIR library. We are developing an open-source implementation of the FHIR specification in Java. [FHIR](#) (Fast Healthcare Interoperability Resources) is a specification for exchanging healthcare data in a modern and developer friendly way.

Note that this is the home for the FHIR version of HAPI. If you are looking for HL7 v2 support, [click here](#).

😊 Demonstration/Test Page

A public test server is now operating at <http://hapifhir.org>. This server is built entirely using components of HAPI-FHIR and demonstrates all of its capabilities. This server is also entirely open source. You can host your own copy by following instructions on our [JPA Server](#) documentation.

😊 Commercial Support

Commercial support for HAPI FHIR is available through [Smile CDR](#).

Announcements

Feb 6, 2019 - HAPI FHIR 3.7.0 (Gale) Released - The next release of HAPI has now been uploaded to the Maven repos and GitHub's releases section.

This release includes support for the now-completed FHIR R4 release (FHIR 4.0.0). It also brings support for Java 11, along with a big number of bugfixes and new features.

As always, see the [changelog](#) for a full list of changes.

HL7 FHIR SS-MIX × FHIR による診療情報共有案

SS-MIX は HL7 V2 を標準採用し、データベースもフォルダ構成ルールのみで単純であるため、開発負担は実は小さい仕組みである。しかし、クリニックやモバイル端末からアクセスしようとする、HL7 V2 通信を開発する必要があり、負担が大きい。

SS-MIX に FHIR GW を追加採用することにより、データ共有対象が広がる。モバイル端末の FHIR 対応アプリも今後、開発、普及が期待できる。クラウドサービスでの SS-MIX アクセスサービスが登場すれば、様々な施設が安価に情報共有を実現できるようになるだろう。

Fast (to design and implement)
